

## Cancer research and data

Providing a central hub for data and  
research evidence

## Research & data

Australia is a world leader in cancer research and the Australian Government is committed to ensuring Australia remains internationally competitive and at the forefront of research and discovery regarding cancer, its origins, treatment and the care of people affected by cancer.

Cancer research and clinical trials are vital to increase our understanding of how to prevent cancer, develop new approaches to detecting, diagnosing and treating cancers, and improve support and care for people affected by cancer.
